

## Automated Liquid Handling Platform

### N96S 96-Channel Fully Automated Liquid Handling Workstation

The NAYO N96S is a versatile 96-channel automatic liquid handling workstation capable of accommodating various functional modules. With foundational procedures high-throughput liquid transferring, continuous dispensing, and gradient dilution, it additionally offers plate transferring, magnetic separation, and temperature-controlled shaking functionalities, greatly expanding its application scenarios.

More than 96-channel pipetting

### Product Features

#### Precise Liquid Handling

Upgraded servo motors ensure precise control of liquid dispensing. The new sealing design eliminates the occurrence of any liquid leakage

#### Versatile Functionality

Plate transfer, magnetic separation, and temperature-controlled shaking functions are available

#### Quick-Change Support

The pipetting module supports fast assembly and disassembly

#### Space Optimization

With a fixed tray structure and dual-axis movement of the pipetting head to reduces horizontal space by 50%

Experience the exceptional performance of the N96S 96-channel fully automatic liquid handling workstation. Its superb design, convenient features, and expandable functionality make it the ideal choice for a variety of applications.

## Extension module

**Magnet Plate**

**MHCS heating cooling and shaking module serial**

**Plate transportation module**

## Product Parameters

	N96S	
Dimensions(W×D×H)	4 deck position	711mm×392mm×582mm
	6 deck position	998mm×392mm×582mm
Pipetting Range	1-1000μl	
Precision	CV≤2.0%	
Resolution	0.1μl	
Principle	Air displacement	
Function Modules	Heating module, temperature control module, shaking module, temperature-controlled shaking module, magnetic plate
